

PROMOITALIA REVITALIZING THREADS

Facial rejuvenation

Recontouring your face with the minimum of fuss.

Revitalizing Promoitalia threads offer one of the latest advances in facial rejuvenation. They work by lifting sagging tissue and realigning it. The threads are designed with a double-spiked barb, which allows them to effectively take hold of the facial tissue when inserted through the skin. Over time, the threads then induce a fibrotic reaction in the surrounding tissue, which ensures that they remain in place and effective for the maximum amount of time. Because the threads work in tissue only, the look which can be achieved, is very natural without a raised eyebrow appearance.

Inserting the threads is carried out in a day surgery setting with minimum post procedure downtime.
