WHAT IS A HAIR TRANSPLANT?

A hair transplant is a day surgery that permanently restores hair by moving hair follicles or "grafts" from one position to another. The grafts are taken from the back of head (the "donor" area) which contains dense hair growth, and then is surgically implanted to the thinning or balding areas (the "recipient" area).

WHAT IS FUE?

FUE or Follicular Unit Extraction is the most advanced method to perform a hair transplant. The individual grafts are taken individually, so there is minimal pain, no scarring and no stitches are required.

WHAT IS EYEBROW TRANSPLANTATION

The same cutting-edge techniques used by our surgical team at ICCM/Crown Clinic in hair transplantation surgery are used for eyebrow transplants. A fuller appearance to re-establishing lost, over plucked or non-existent eyebrows is now possible. The same cutting-edge techniques used by our surgical team at ICCM/Crown Clinic in hair transplantation surgery are used for eyebrow transplants. A fuller appearance to re-establishing lost, over plucked or non-existent eyebrows is now possible.

WHAT IS THE PROCEDURE?

After application of a local anaesthetic to the donor site, the lifelong hair bearing follicles will be individually removed and prepared for transplantation. Once all of these "grafts" are ready for transplant, anaesthetic will be administered to the recipient site, the area will be prepared and then the grafts will be planted. They are very skilfully transplanted at an angle that mimics the natural, pre-hair-loss hairline. The entire procedure can take anywhere from five to ten hours.

WHAT CAN I EXPECT AFTER THE PROCEDURE?

After undergoing hair transplant surgery, you can expect to remain sensitive for the first two to five days after surgery, with pain relief medication recommended to suppress the pain. You will also be able to return to your daily routines and activities between two to five days after surgery. Patients can expect the transplanted hair to fall out over the span of two to three weeks, before new hair growth commences within a few months post treatment. New hair growth typically occurs after 3-4 months post surgery.

THECROWNCLINIC

ARE THERE RISKS INVOLVED IN THE TREATMENT?

Risks are minimal, FUE hair transplantation is very safe. Precautionary courses of antibiotics and anti-inflammatories are issued to minimize any possible swelling and/or infection.

WHAT IS THE RECOVERY TIME?

FUE hair transplantation is a walk in, walk out procedure. Depending on your profession, we recommend a couple of days' rest, and there will be scabbing which lasts up to 12 days. Most patients are able to return to work immediately.

INTERNATIONAL CENTRE FOR COSMETIC MEDICINE & CROWN CLINIC

Operating under the umbrella of ICCM, the Crown Clinic has been specialising in all areas of hair loss and hair restoration since 1999 – in that time we have established ourselves as one of the leading hair loss clinics in Sydney and Campbelltown.

ICCM and Crown Clinic have a shared vision to provide a centre of excellence in the provision of a cosmetic medical service. We work closely with each and every patient to ascertain the best decision for their unique circumstances. We ensure that our patients remain well-informed of their options and expected outcomes, guiding them through every step of their chosen treatment.

Our well-appointed facilities are a patient focused sanctuary where patients can feel comfortable and confident that they are receiving the best possible services.
